Customer Reviews

Best purchased I ever made. They say you get what you paid for, but in this case I got a whole lot for a little price! Great reference sheet for the kids while doing homework. Easy to take along. It's laminated and very durable. I have since bought several for different subjects. It's hard to remember all the formulas it and it helps during review time for exams.

was looking for something for daughter that didnt involve downloading or copying and knowing in a couple days would be folded and lost or forgot. Yes it cost more than downloading and printing but has tabs and i purchased other useful math sheets that fit in a binder labeled (math problem formulas} . easy instruction and a great study guide as well as reference. This should be given out to students from the district, but dont get me started.

If you are taking geometry, whether intermediate or advanced, this quick reference is the tool you need. Absolutely amazing and you can solve any problem using this reference. dont forget to get

part 2

For those of us who are older, the font of the print on these study guides are a challenge. The second problem I found is the color of the background and the color of the print blend making it hard to read. It is not a crisp abstract that is easy on the eyes to read. I use a magnifying glass to clearly see this guide.

GREAT RESOURCE for a great price...other kids at school are in envy. i WOULD DEFINITELY RECOMMEND THIS ITEM FOR ANYONE IN GEOMETRY.

very pleased with this purchase will use it much as I continue to pursue a better understanding of math subjects.

Great summation of the important info for Geometry formulas. All in one location makes reviewing for the exams easier and more efficient.

This is a complete assist guide for any student taking this course. I strongly recommend BarCharts for any and all subjects
