Purchased this for learning Web Intelligence. My experience is that this book is just a re-stating of

the menu options and tool tips. If you can read the menu items, and hover your mouse over icons for tool-tips, I don't think you need this book. As an example, I wasn't sure why "object from this query" and "result from another query" were greyed out as filter options. Opened the book, hoping for an example and again, found only re-listing of the menu options. A quick google search revealed that those two options are not available with OLAP connections. Same story with using outlines. They didn't appear to be working. Looked it up in the book, nothing substantial. Found out that outlines don't work in the rich client. When I keep having to refer back to Google, I wonder what the point of the book is.

Was exactly what I was looking for to supplement my training.

Excellent reference to help you work with SAP BO 4.1 - which is what i needed.

Great information but very upper level for a beginner.
